Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 03 February 2006.
2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Sakiyama et al. (US 6063023). Sakiyama et al. disclose an endoscopic system including an imaging unit (col. 5 lines 39-40), a plurality of types of optical adapters (4) that is freely detachable attached to the distal section of the electronic endoscope and that has a predetermined observational system that includes an identification section (col. 6 lines 1-27), a control device (col. 7 lines 30-41) that is electrically connected to the electronic endoscope and that includes an optical adapter identifying/verifying means for detecting the identification section so as to verify the type of optical adapter, an image processing means (col. 5 lines 49-63) for receiving an imaging signal sent from the imaging unit so as to produce a video signal and a control means for manipulating a video signal produced by the image processing means and controlling the electronic endoscope and external equipment and a display device that receives the video signal sent from the control device and displays an image represented by the video signal.

Response to Arguments

Applicant's arguments filed 2/3/026 have been fully considered but they are not persuasive. Applicant argues that Sakiyama fails to disclose an endoscope system that includes a plurality of adapters that have "a predetermined observational optical systems that includes and identification section with which the type of optical adapter can be identified. Applicant also argues that Sakiyama does not disclose that the master-imaging unit is used to identify the type of optical adapter and Sakiyama fails to disclose an endoscope system including a control device that includes an optical adapter identifying/verifying means for detecting the identification section. Sakiyama discloses optical adapters that each includes optical data items. It is the Examiner's position that these optical data items specific to the adapters act as identifiers for the adapter. Sakiyama specifically discloses a system that identifies each data item for the adapter, which inherently detects the identification of the adapter.
